

Flight Deck and Cabin Risk Reduction Informational Videos

Richard Hill

Chief Scientific and Technical
Advisor for Aircraft Fire Safety
Federal Aviation Administration

This Presentation will show various video clips and discuss the production of two videos designed to reduce the risk from PED fires in the cabin and flight deck of passenger aircraft. The presentation will also outline the methodology used for the development and production of the videos. The video clips will include experimental testing as well as clips from the final videos. The presentation will conclude with an outline of future work planned for cabin and cargo risk reduction from the carriage of lithium batteries, PED's, and other dangerous goods.
