

David Weed is a Human Factors Research Specialist and the Team Coordinator for the Cabin Safety Research Team (CSRT) at the FAA Civil Aerospace Medical Institute. His team is responsible for conducting human factors research related to aircraft cabin passenger and crew safety in areas such as passenger information systems, aircraft evacuation, ditching, and safety equipment. His main areas of research focus, within the realm of cabin safety, are passenger evacuation from aircraft, and passenger safety information systems effectiveness and possible improvements. David has a B.A and M.A. in Psychology from the University of Central Oklahoma.
