

## **Overall Cabin Disinfectant Methods**

**Presenter:** Bryan Moran, Boeing

**Abstract:** As part of our response to the Global Pandemic, Boeing launched the Confident Travel Initiative including the formation of a Clean Airplane Program Team dedicated to help prevent and minimize transmission of SARS-CoV-2 in air travel. This team developed and tested methods to clean and disinfect aircraft cabins, flight decks, and cargo holds. Boeing also provided airlines and industry stakeholders with a detailed guidance document with information on airplane airflow, disinfectant materials, methods, technologies, and operational considerations. Boeing also conducted efficacy testing on many disinfecting solutions. This proposed conference topic provides an overview of this guidance information and the work of the Clean Airplane Program.
