

## **Skid Fire Containment Bag – Lithium Battery Fire Test**

Vimuth Fonseka

Undeclared dangerous goods in air cargo, especially those containing lithium ion batteries, pose significant risk of unexpected fire events. Fire Containment Covers (FCC) and its product extensions were researched, designed and deployed to the industry to mitigate such risks. The continual research on Fire Containment products has led to the design and testing of the Skid Fire Containment Bag (Skid FCB) that provides fire protection for undeclared goods loaded on pallet skids.
