

Flow Visualization Study in the OSU

Comparison of Cold vs. Hot Internal Flow

Presented to: IAMFTWG

By: Robert I Ochs

Date: June 8 2017

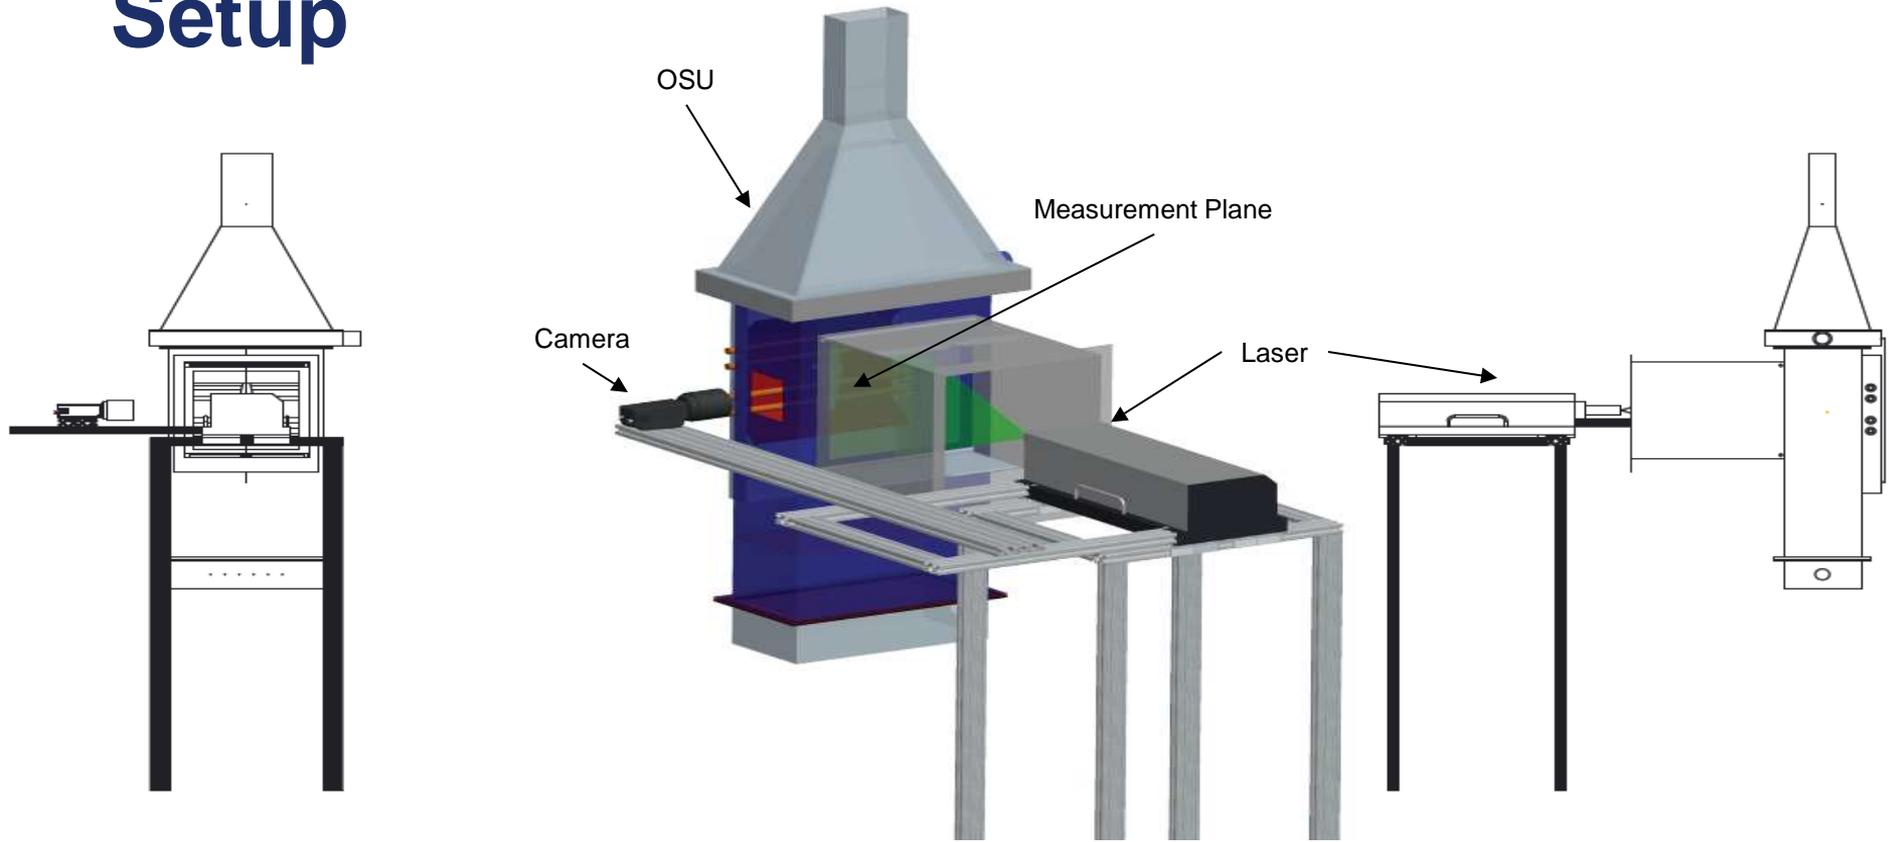

**Federal Aviation
Administration**

Introduction

- FAA's PIV system was set up around an OSU rate of heat release apparatus
- PIV is a non-intrusive, whole flow field velocity measurement technique

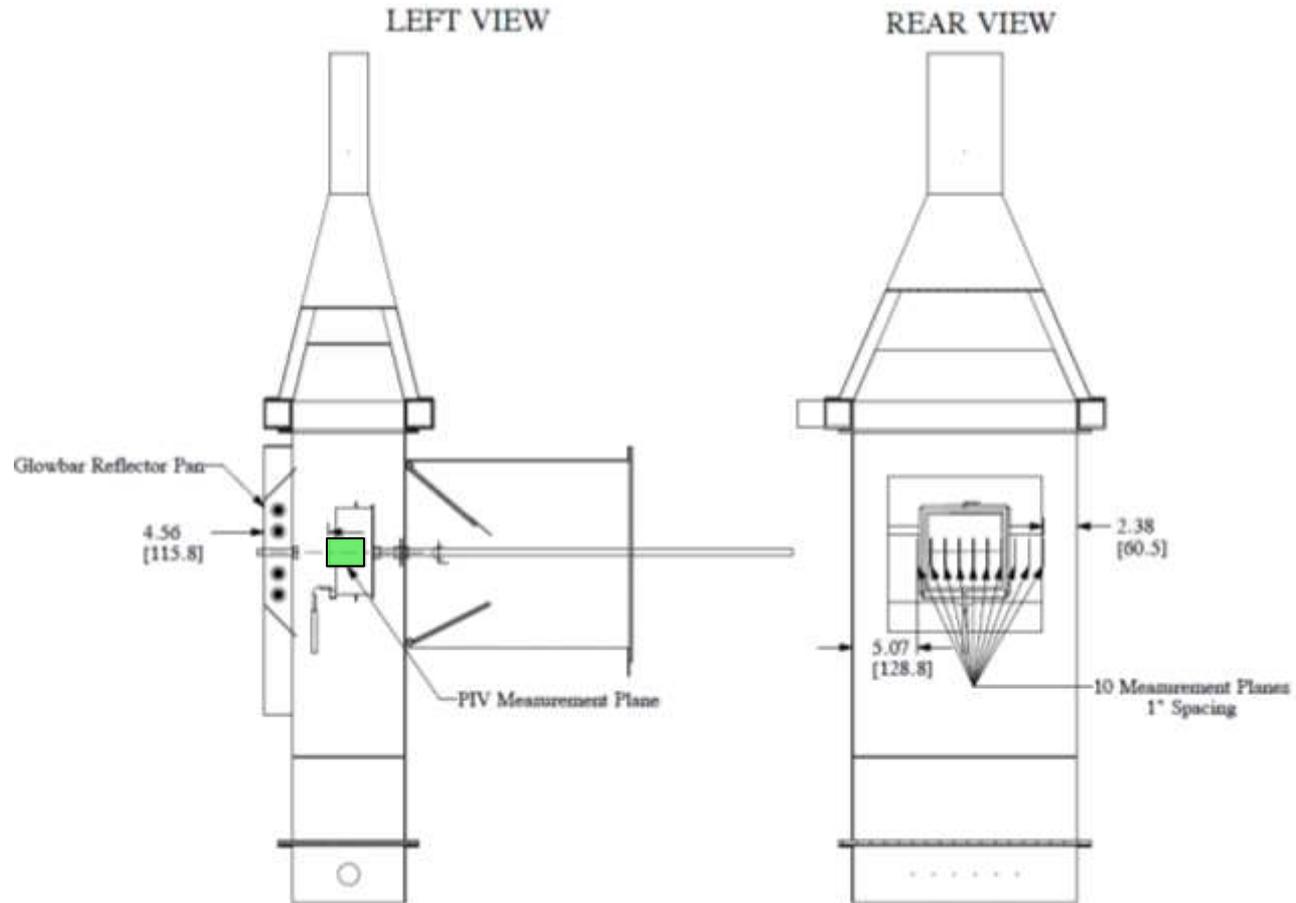

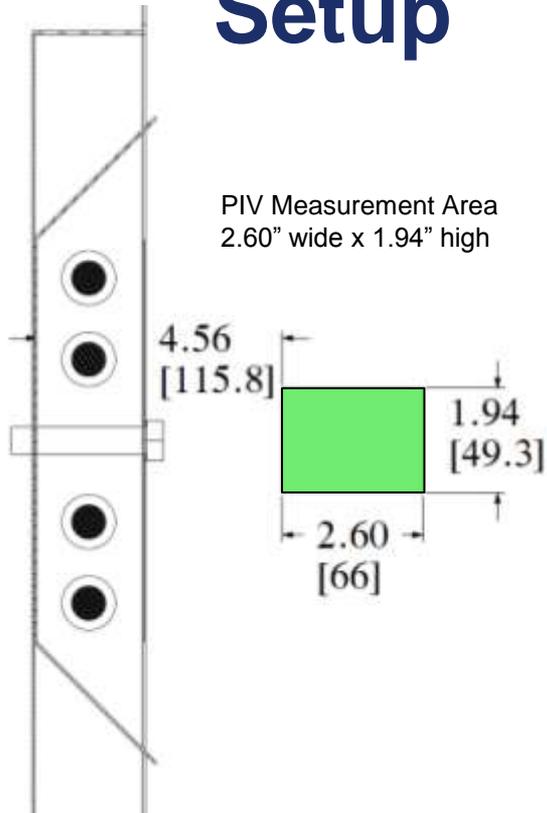

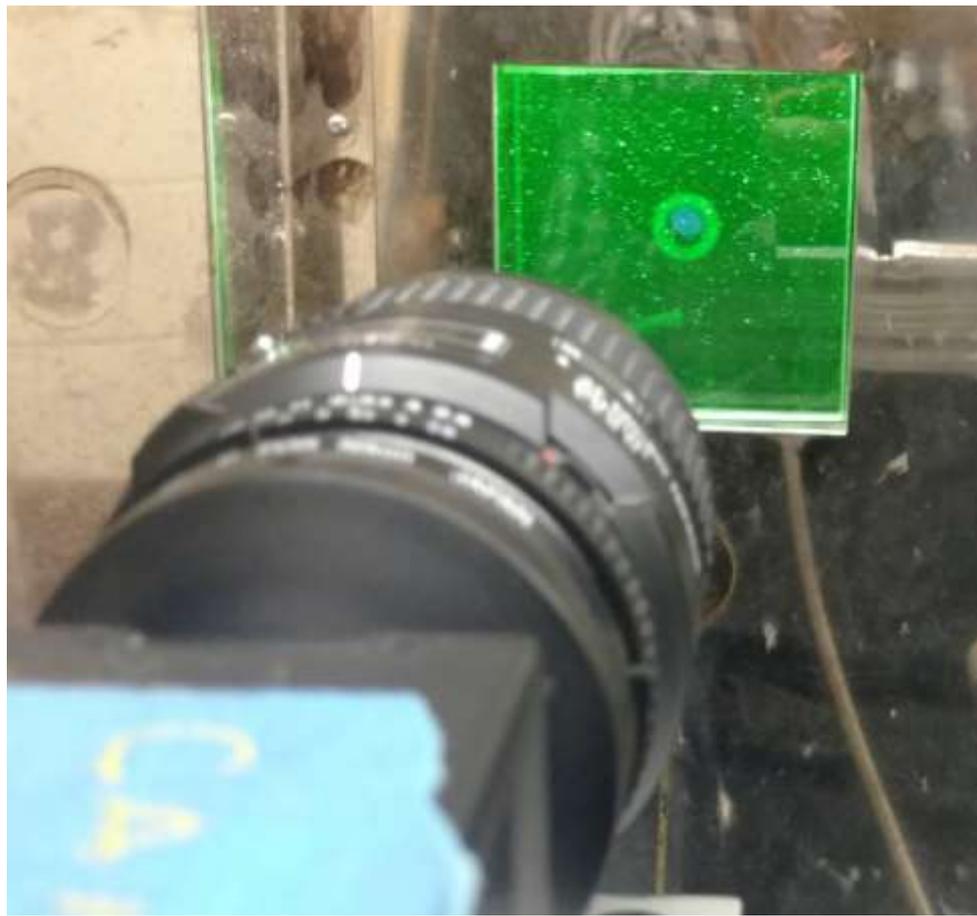

Setup

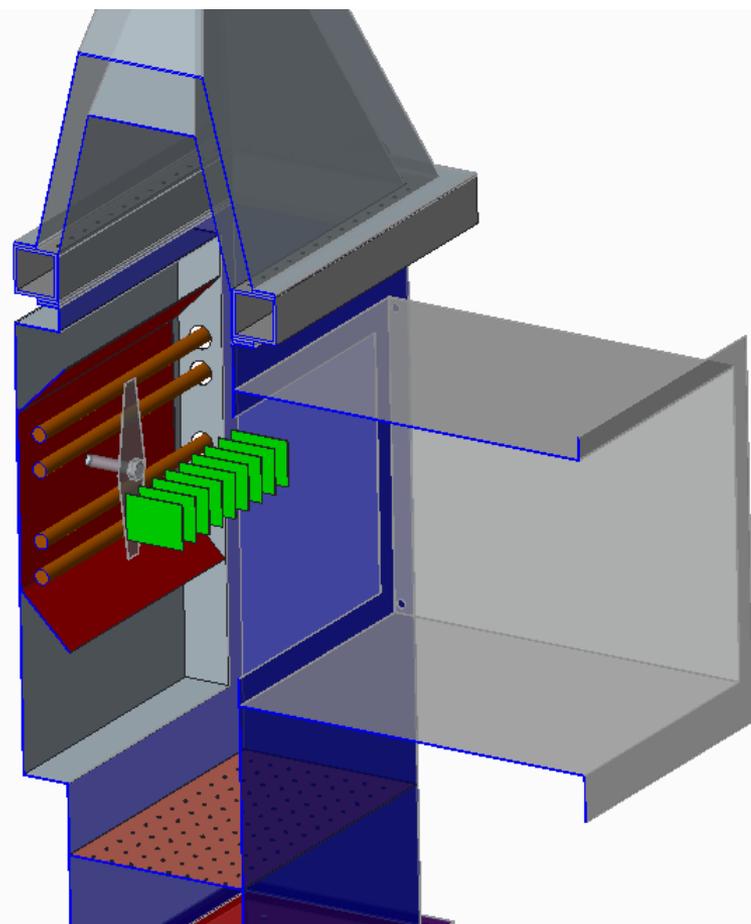

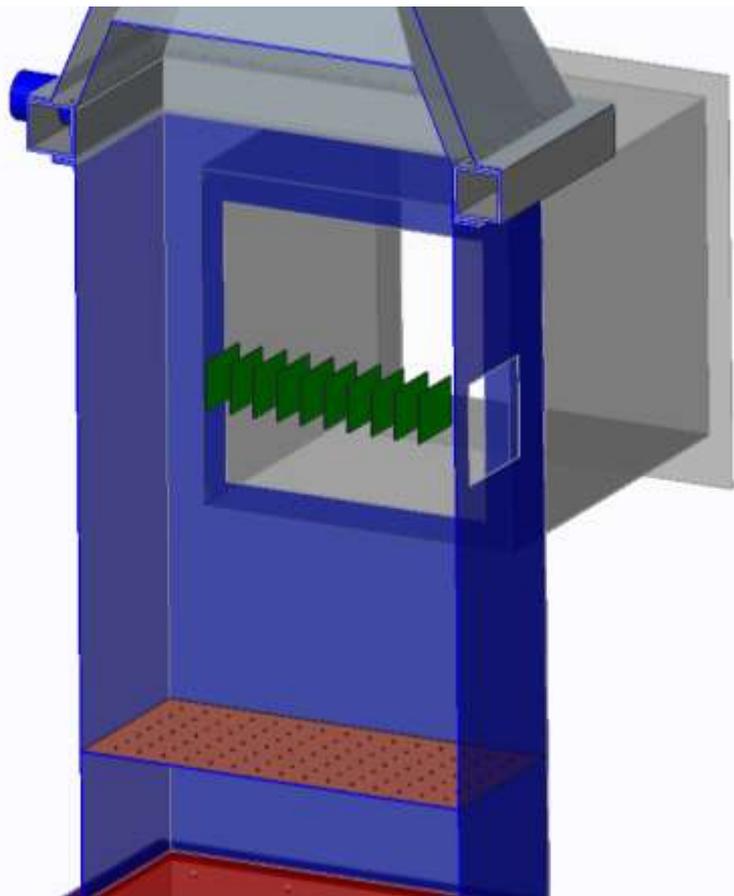

Setup

PIV Measurement Area
2.60" wide x 1.94" high

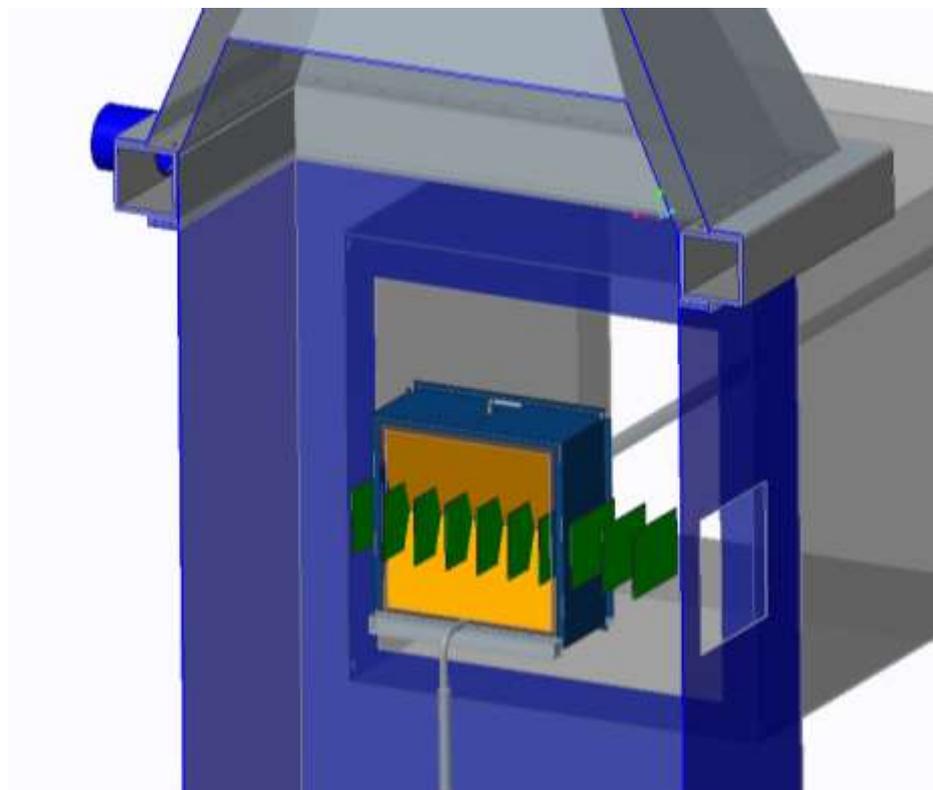

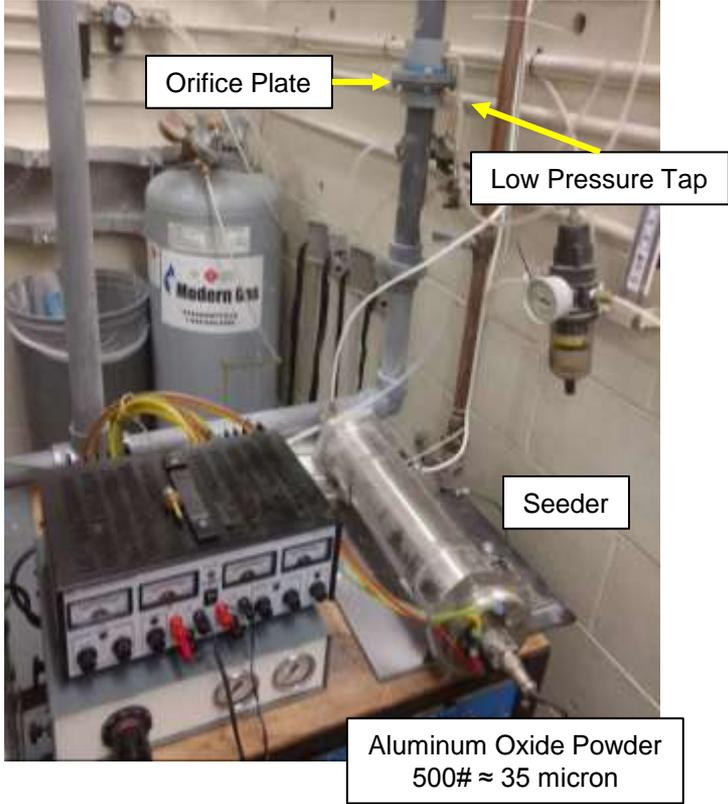

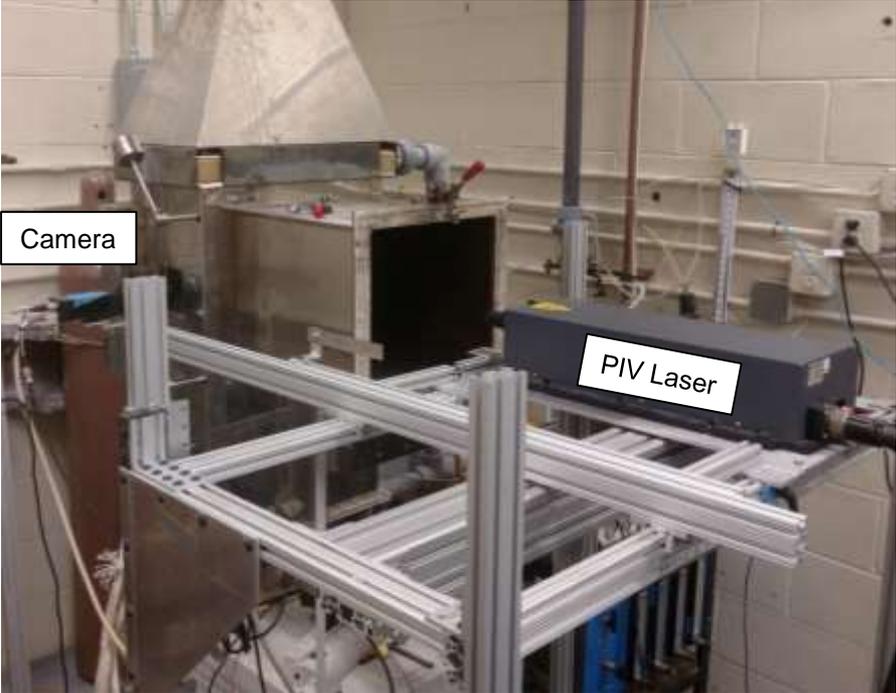

Federal Aviation
Administration

Administration

PIV Measurement Details

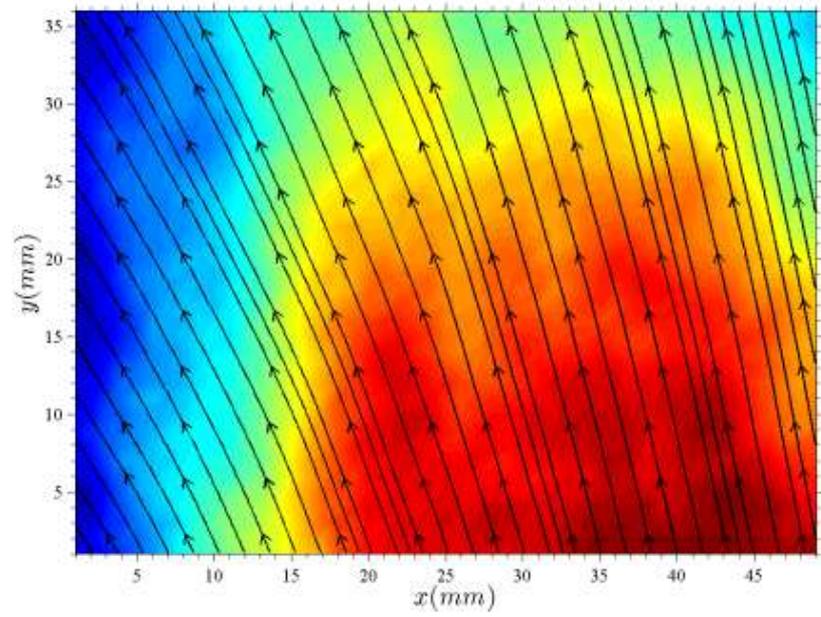

- Acquisition Settings
 - Time between pulses
 - 300 μ s
 - Trigger rate
 - 15 Hz
 - Number of Images
 - 500
 - Time domain
 - 33.3 seconds
- Analysis Settings
 - 64 x 64 Interrogation Area
 - 50% Overlap
 - Peak Validation 1.2 relative to nearest peak
 - Moving Average local neighborhood validation
- Resulting Vector Map
 - 49 x 36 vectors
 - 1764 total vectors per measurement area

Hot OSU Setup

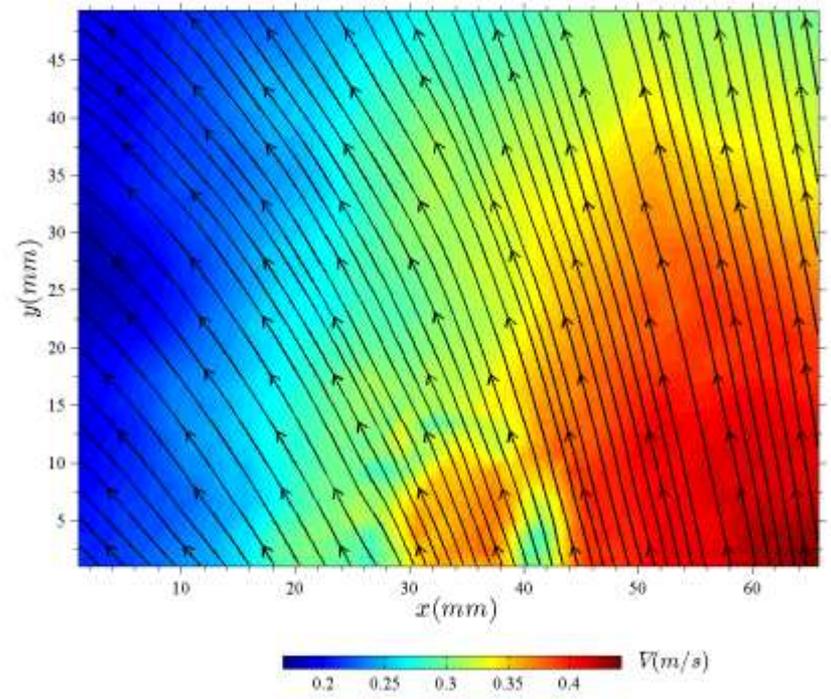

7/8" from left wall

Cold OSU

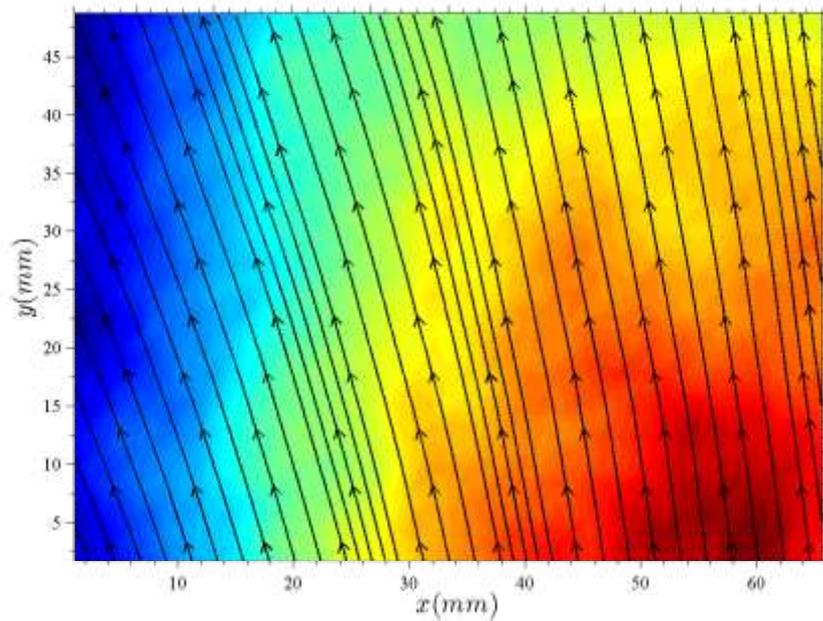

Hot OSU

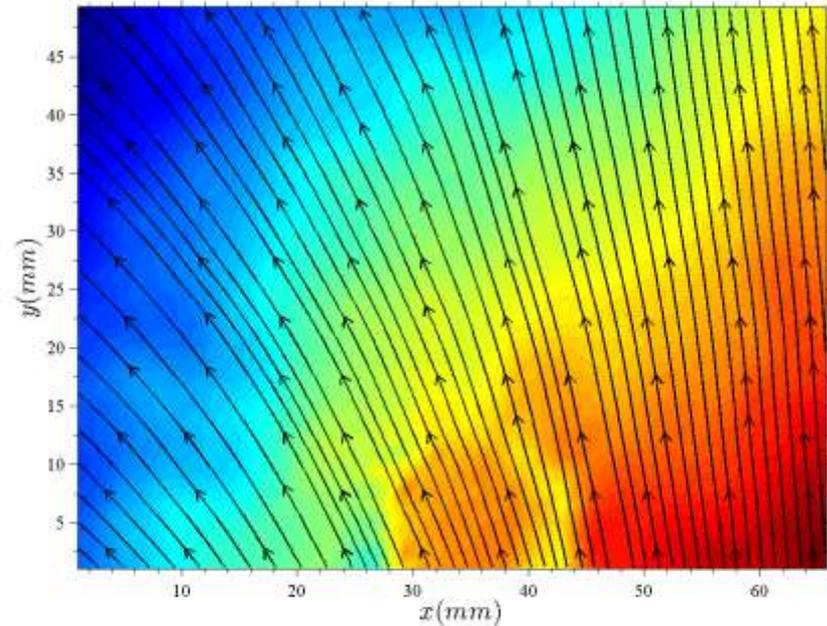

1 7/8" from left wall

Cold OSU

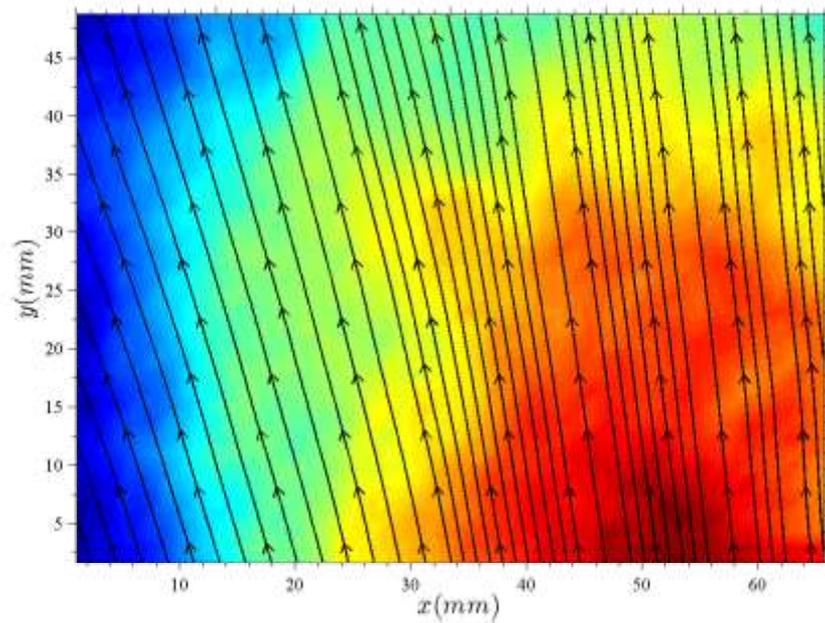

Hot OSU

3 7/8" from left wall

Cold OSU

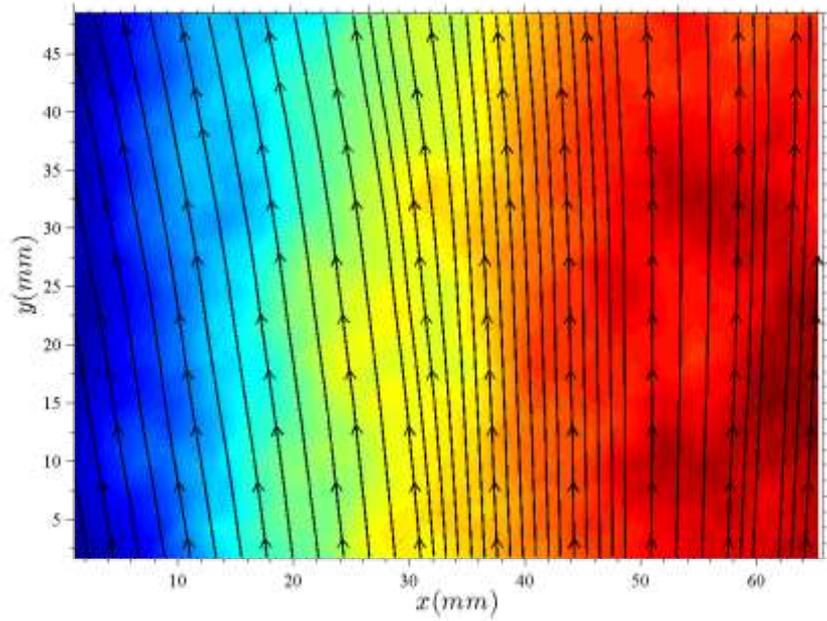

Hot OSU

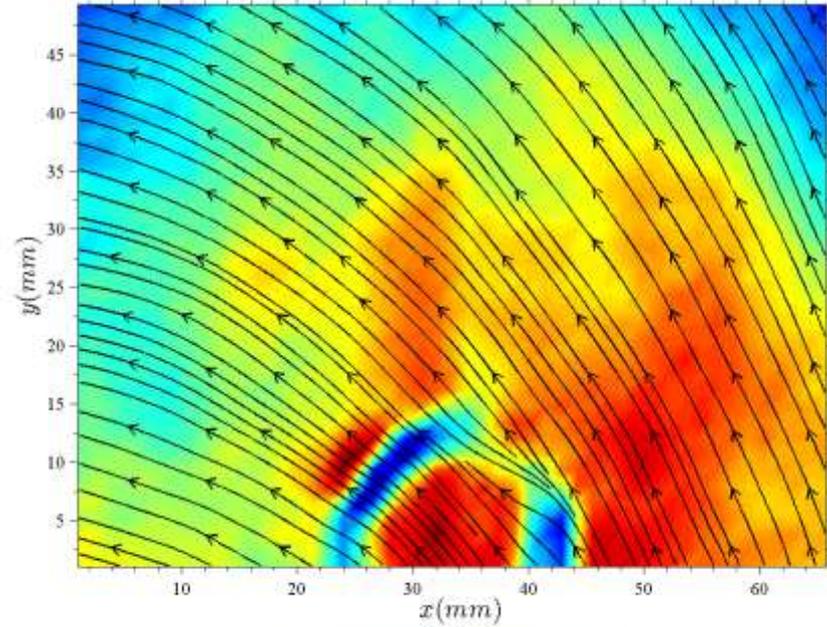

4 7/8" from left wall

Cold OSU

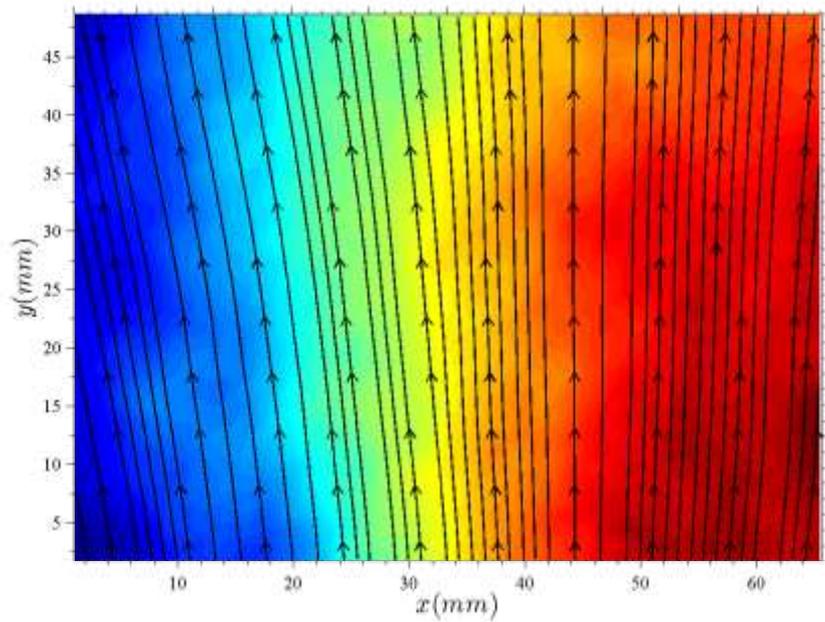

Hot OSU

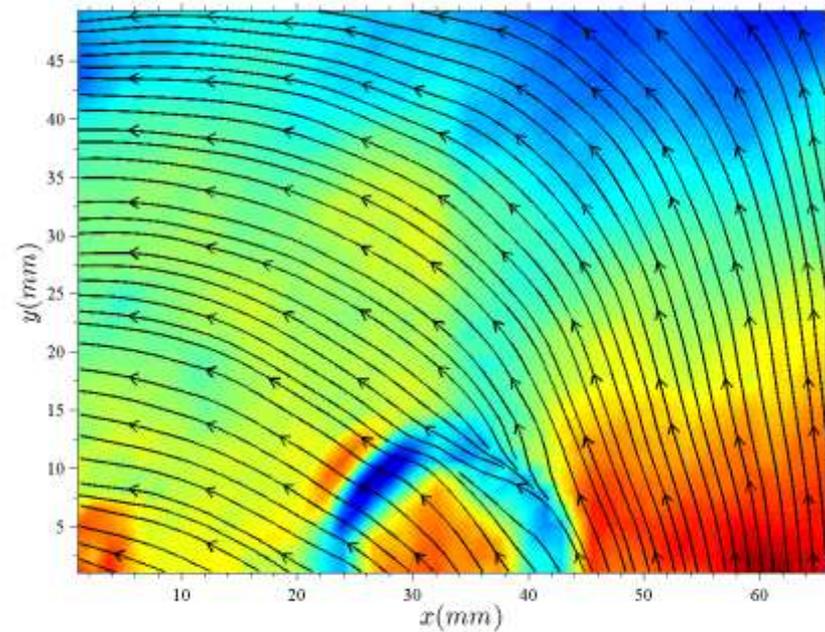

Federal Aviation
Administration

5 7/8" from left wall

Cold OSU

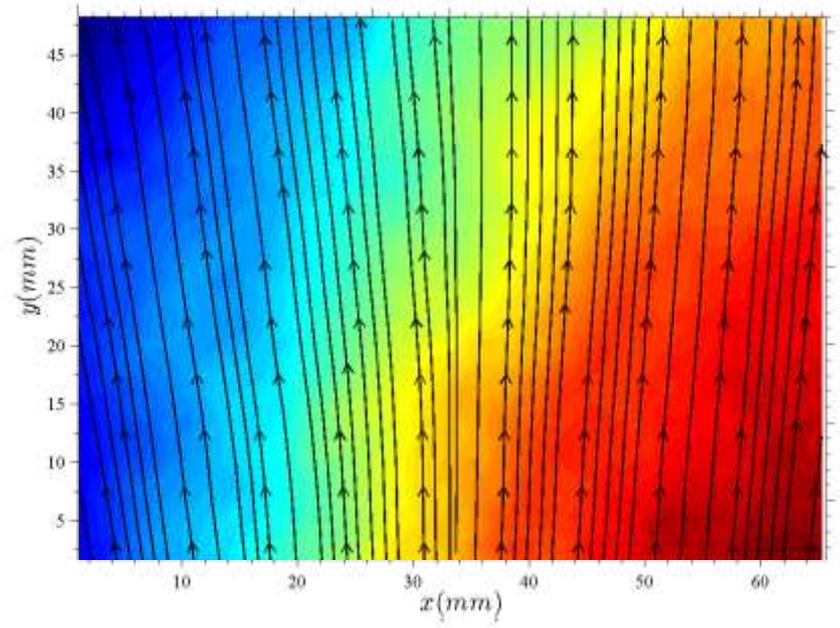

Hot OSU

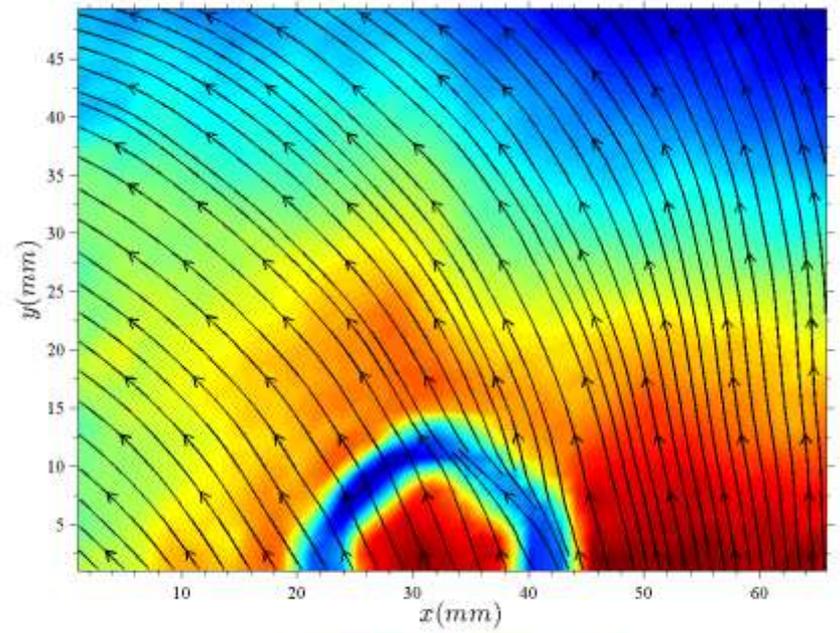

Federal Aviation
Administration

6 7/8" from left wall

Cold OSU

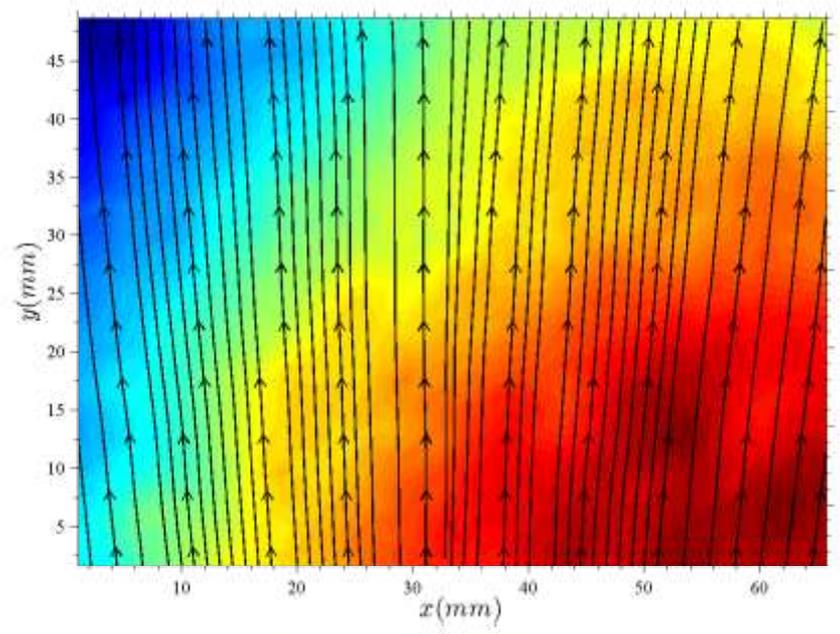

Hot OSU

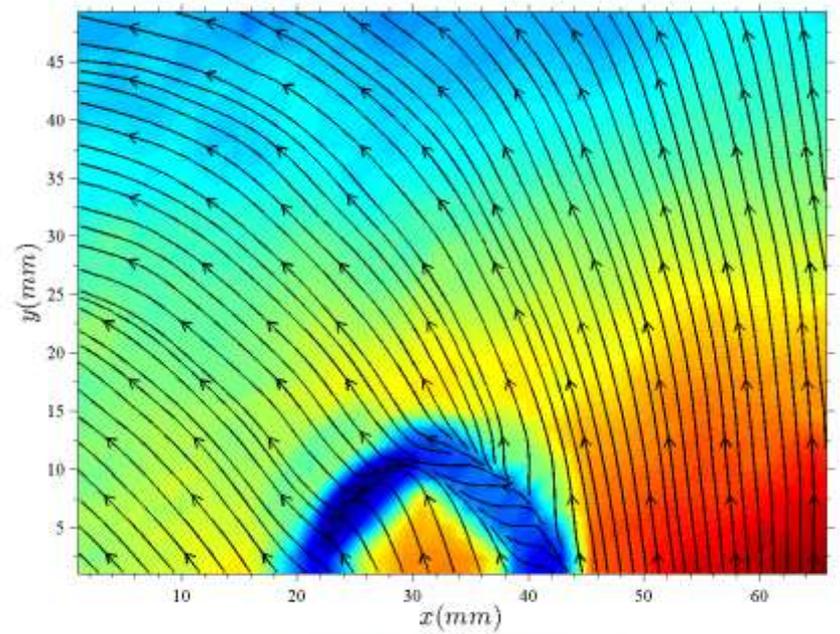

7 7/8" from left wall

Cold OSU

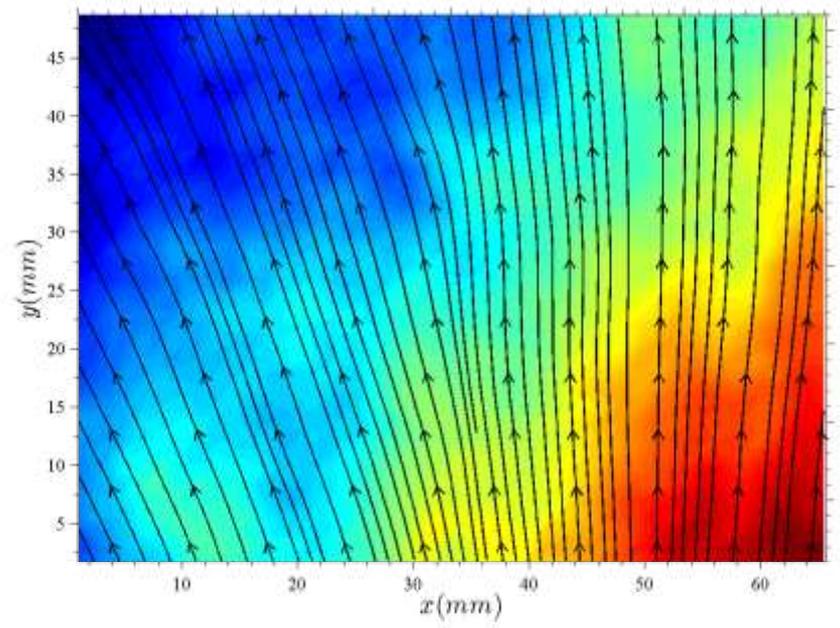

Hot OSU

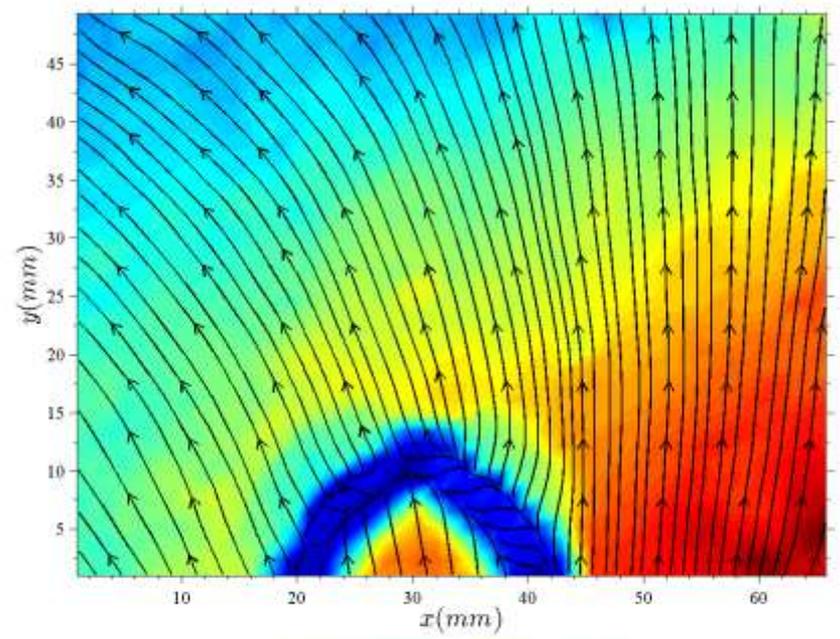

8 7/8" from left wall

Cold OSU

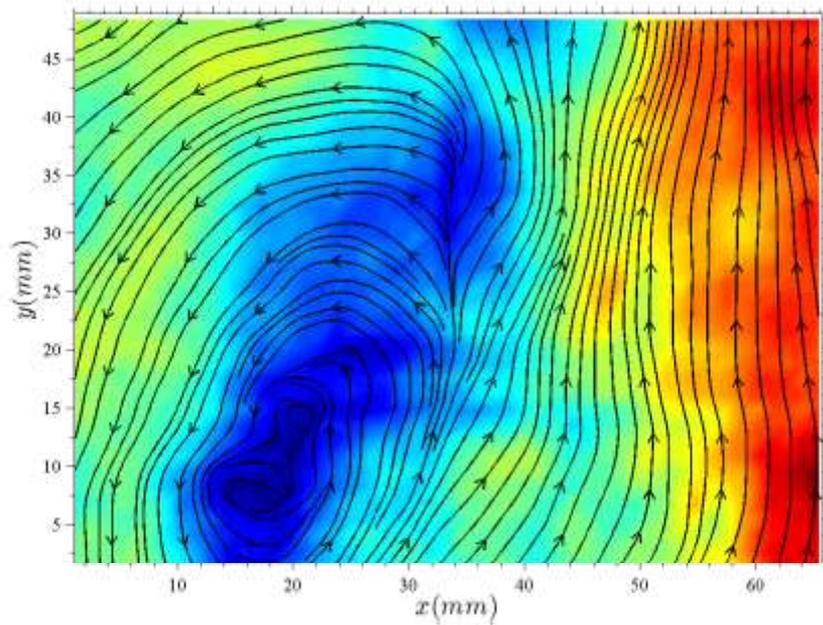

Hot OSU

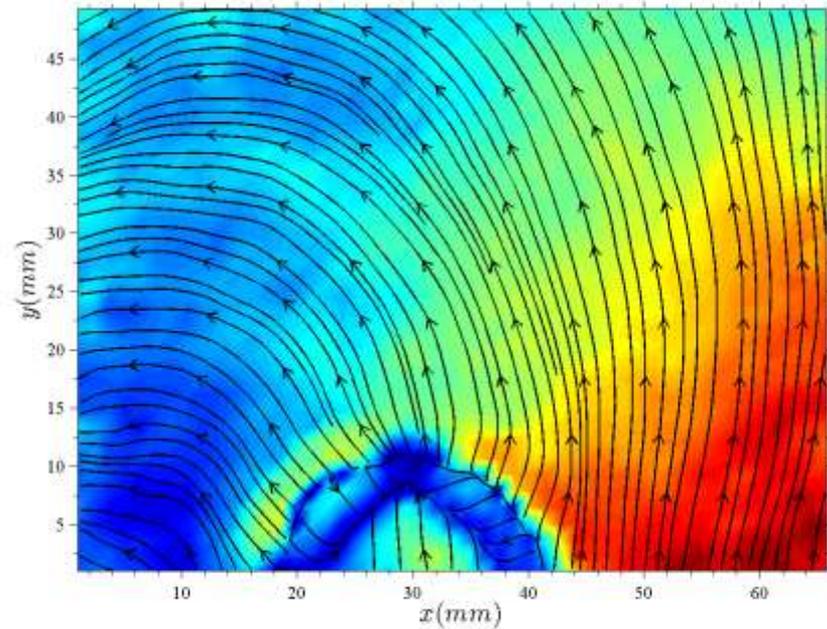

9 7/8" from left wall

Cold OSU

$\bar{V}(m/s)$

Hot OSU

$\bar{V}(m/s)$

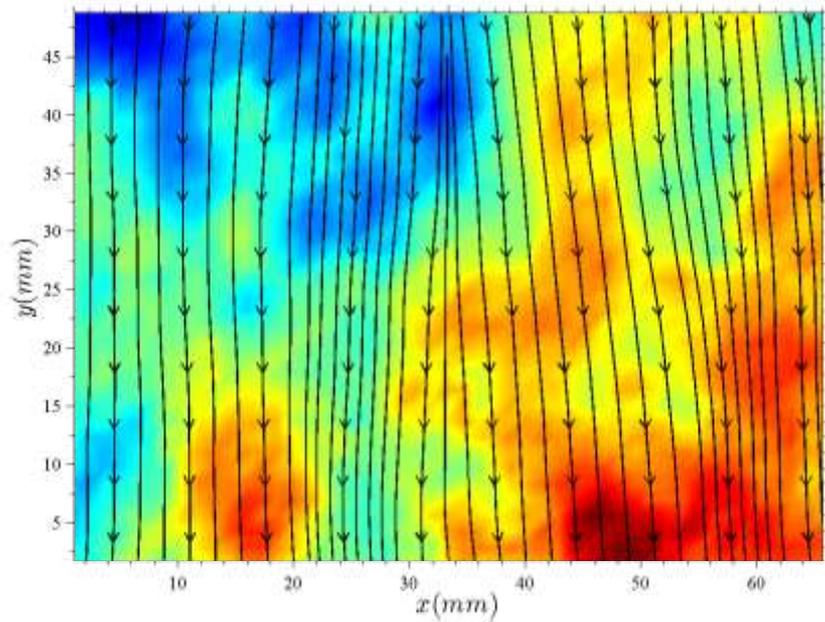

Federal Aviation
Administration

10 7/8" from left wall

Cold OSU

Hot OSU

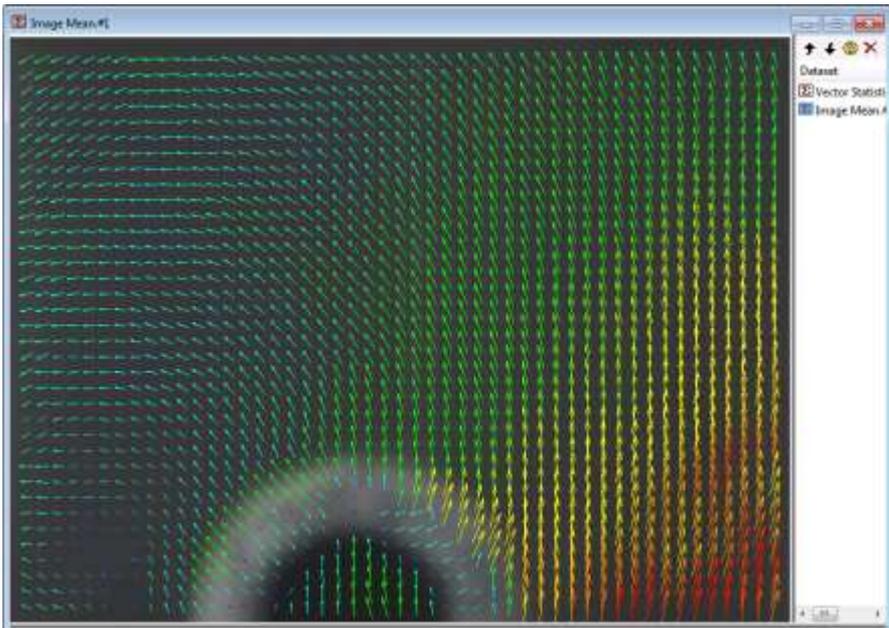

$\bar{V}(m/s)$

No Hot OSU data – camera too close to window too hot!

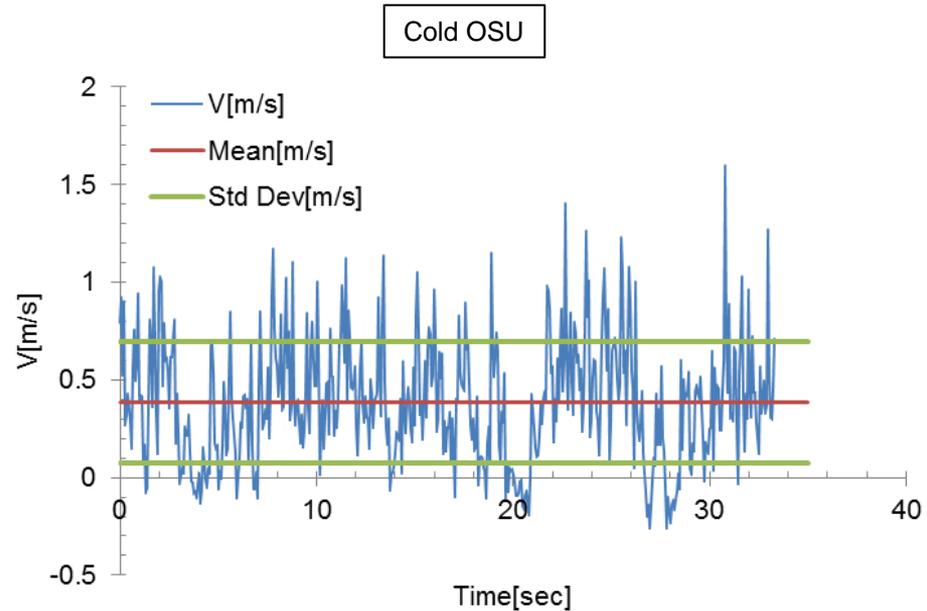

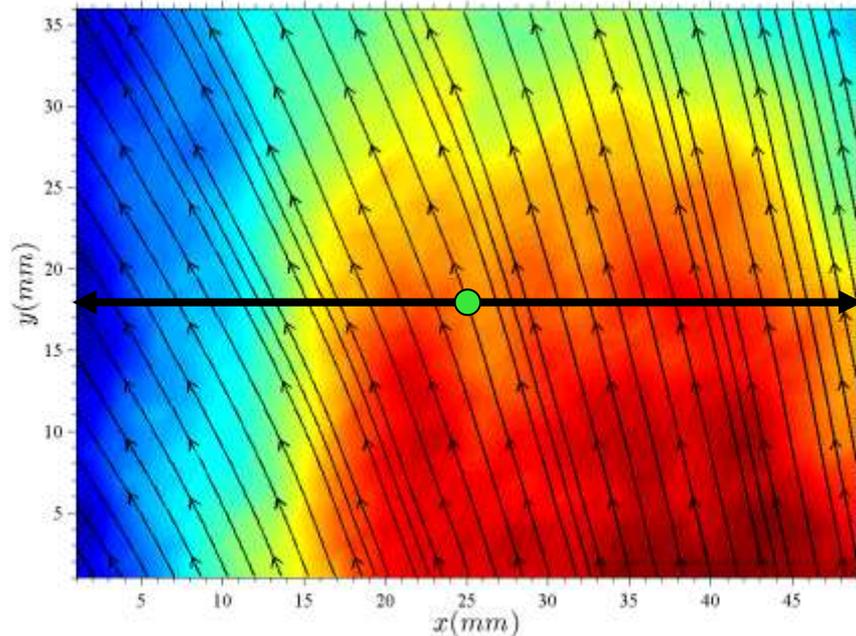

Federal Aviation
Administration

Turbulence Intensity

7/8" from left wall

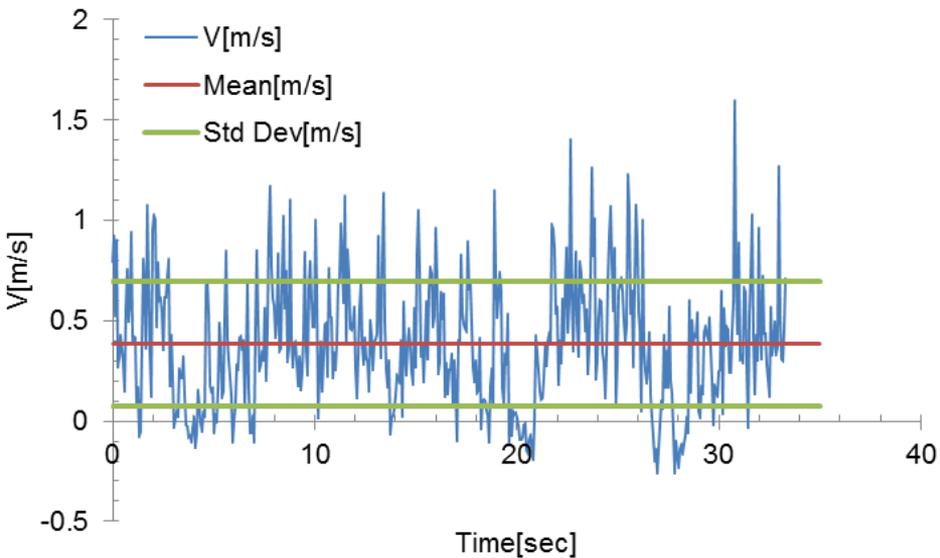

Mean V Velocity = 0.385 m/s
Std Dev = 0.313
%Std Dev = 81%

Federal Aviation
Administration

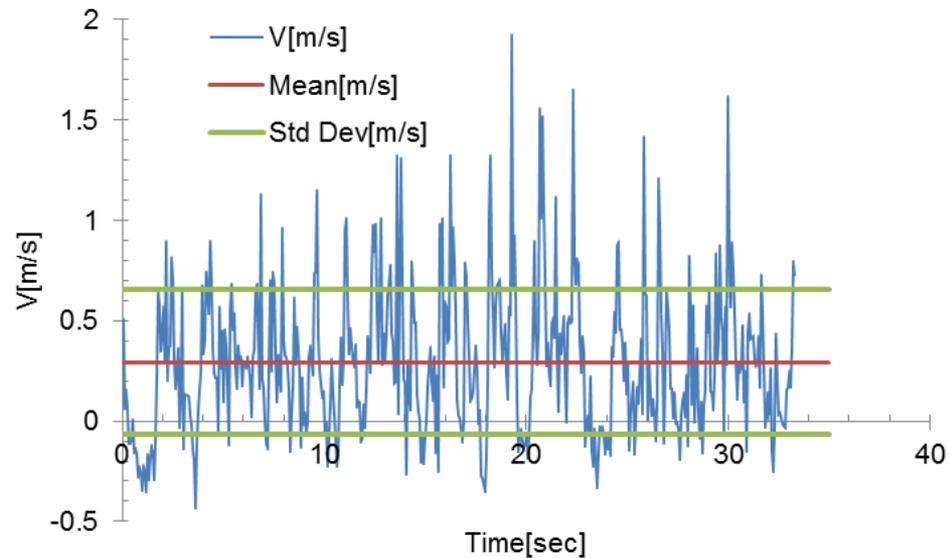

7/8" from left wall

Cold OSU

Mean V Velocity = 0.385 m/s
Std Dev = 0.313
%Std Dev = 81%

Hot OSU

Mean V Velocity = 0.294 m/s
Std Dev = 0.360
%Std Dev = 123%

Federal Aviation
Administration

Plexiglas OSU for Visualization Study

Federal Aviation
Administration

Summary

- PIV measurements were made in the OSU, both hot and cold conditions
- Higher levels of turbulence were found for hot OSU, though measurements could be re-done for more certainty
- Will perform cold flow measurements in clear OSU
- Will take suggestions for other possible measurements
 - At top exhaust plane
 - Near thermopile junctions
