Fire Containment Cover ISO Standard Development

Federal Aviation Administration

Presented to: International Aircraft Systems Fire Protection Working Group. Atlantic City, NJ

By: Dave Blake, FAA Technical Center Fire Safety

Date: November 17, 2011

- The FAA has requested that ISO (the International Organization for Standardization) develop a standard for Fire Containment Covers (FCC's).

- At least five working group meetings have been conducted to develop the standard.

- Participation in the working group has included EASA, FAA, Airbus, Boeing, FedEx, UPS, SATCO, and others.

- The working group has finished the draft version and it will be submitted to the parent organization for a vote on finalization.

- **The overall objective of the FAA is to revise TSO-C90d and reference the ISO standard as a requirement.**

- **There has been discussion on developing another ISO Standard to apply to fire resistant ULD's but to date a working group for this has not been established.**
